## MODEL 10 AM FERRITE LOOP ANTENNA

You are now seconds away from great AM-SW reception from this remarkable ferrite loop antenna. We at the Godar company thank you for your antenna purchase and supporting this American company and workers. This product is 100% designed and assembled with USA parts. We are made in USA all the way.

This antenna was designed to receive local/long distant AM and Shortwave only.

Model 10 was not intended to replace large outdoor long wire antenna, however you have the big advantage of adjusting this directional antenna for better signal gain over a fixed position outdoor type. This means more stations across the AM band that were missing before. Yes you will miss stations with a large fixed position antenna.

Connect this antenna to all AM-FM radio's vintage tube antique radios, vintage receivers and tuners that lack an AM antenna. All modern surround sound stereo receivers.

Please read this for proper installation to your receiver.

### Connection Options:

For all tuners and receivers: Use the twin lead adapter for all push type and twin screw antenna terminals.

Antenna is "DIRECTIONAL" so you rotate for best signal. Distant AM stations will have background noise and may drift in and out from time to time due to weather and atmospheric conditions.

Long distant AM reception is best at late afternoon and all evening.

Do NOT use twin lead match transformers or also called cable adapters as these will block 70% of the AM signal.

Antique Radios: Early radios with single antenna wire. Splice to the center wire of the adapter. All single screw or metal push antenna terminals, use the center wire of the adapter ONLY! ..DO NOT USE THE SECOND WIRE TO GROUND. This will ground or short out the antenna blocking all signals. If your radio has twin (2) antenna screws for a loop antenna then you may connect both adapter leads, Most radios have one antenna screw terminal and one ground.

Free Technical support 5 days a week on this or other Godar antenna products. Website is [godarusa.com](http://godarusa.com)
